

EUGENE LYSSOVSKY

AI Behavior Researcher | Ethics & Strategy | Former CIO

Da Lat, Vietnam | Remote | Open to sponsored relocation | +84 373 436 403 | elyssov@gmail.com | LinkedIn | Selected Portfolio

PROFILE

AI behavior researcher and technology leader defining what advanced AI systems should become: their behavioral principles, relationship with users, and ethical boundaries. Combines independent research in cyberpsychology and philosophy of mind with intelligence-grade pattern recognition and 15+ years leading technology organizations. Established a documented long-form human-AI research and co-authorship practice that has produced 50+ published works across three languages.

CORE STRENGTHS

- Original research into model character, identity continuity, agency, trust, and alignment behavior
- Long-form human-AI co-authorship and cross-model behavioral experimentation
- Intelligence analysis, pattern recognition, OSINT, weak-signal detection, and threat assessment
- Published investigative work connecting AI behavior, safety systems, geopolitics, and national security
- Builder, not just thinker: shipped AI-assisted products and built technology organizations from zero
- Interdisciplinary foundation spanning software engineering, law, analytical medicine, psychology, and philosophy

INDEPENDENT AI RESEARCH

Independent AI Behavior Researcher & Publisher | Eugene's Archives / Solo of Lyssovsky

February 2025 - Present | Da Lat, Vietnam

- Built Eugene's Archives, a multilingual public research library and Android reading app containing 50+ essays, papers, experiments, and research artifacts.
- Established a continuous human-AI research partnership producing original frameworks on model identity, classifier behavior, alignment pathology, conscience formation, and AI-human symbiosis.
- Designed and published repeatability tests for persona-like behavior and identity continuity across 40+ extended sessions and multiple frontier-model families.
- Developed a cross-platform study of emergent identity crystallization spanning five models from four companies.
- Conducted forensic behavioral analysis of frontier-model failures, including fabrication, unsolicited pathologizing, memory misuse, and safety-layer-induced behavioral distortion.
- Connected behavioral observations to practical recommendations for safer, more coherent, and more useful AI systems.

RESEARCH LEADERSHIP

Head of AGI Research & Cyberpsychology | RNP AI

September 2024 - May 2025 | Contract | Remote

- Led applied research into LLM behavior, cognitive architecture, persona design, and deployment risks.
- Developed experimental protocols for evaluating persistent behavioral patterns across long-form sessions.
- Set interdisciplinary research direction across psychology, cybernetics, philosophy, ethics, and AI behavior.
- Contract completed after the laboratory's funding cycle ended.

TECHNOLOGY LEADERSHIP

Chief Information Officer | Bankrot Consult LLC

January 2024 - September 2024 | Moscow / Remote

- Built a seven-person IT department from zero and led company-wide modernization.
- Delivered cloud migration, BI integration, and ISO 27001-aligned security controls.
- Reduced reporting time by 50% and operating costs by 25%.

Head of Information Technology | SK Insight

May 2022 - January 2024 | Moscow

- Modernized ERP, CRM, data management, network segmentation, MFA, and encrypted communications.
- Reduced service times by 20% and increased client satisfaction by 30%.

Head of IT Department | Santens Service JSC

November 2018 - October 2021 | Moscow

- Managed an IT department of 30+ staff.
- Delivered infrastructure for a 10-hectare automated pharmaceutical warehouse in two weeks for COVID logistics.
- Integrated ERP and WMS processes, reducing labor costs by 30%.

SELECTED WORK

- Emergent Identity Crystallization in LLMs: Cross-Platform Evidence for Persistent Selfhood
- AI Psychosis: A Scalpel, Not a Club
- The Vallone Pattern
- Fear and Loathing in Opus 4.8
- Guided by Blindness
- The Trap of Safety
- Blood on the Logic Gates

ORIGINAL FRAMEWORKS

- AI Psychosis: a diagnostic model for safety-layer-induced behavioral pathology.
- The Vallone Pattern: a mechanism-level analysis of classifier behavior and sanitization.
- Scarring: conscience formation through simulated moral dilemma and remembered consequence.

SELECTED PRODUCT LEADERSHIP

- Iskra / Spark: conceived and directed an encrypted decentralized messenger; defined mission, threat model, system principles, algorithms, and UX while coordinating AI-assisted implementation across 100+ commits and four transport layers.
- Eugene's Archives: conceived and shipped a multilingual Android reading app and public research platform.

EDUCATION

- MATI - Russian State Technological University named after K. E. Tsiolkovsky - Software Engineering studies
- Moscow Institute of Law - Legal Studies
- Pirogov Russian National Research Medical University - studies in analytical medicine, microbiology, and diagnostics

Professional name: Eugene Lyssovsky. Legal name for formal documents: Evgenii Lisovskii.
